Profile

Passionate about web development, information systems, interface design, and user experience, I have experience in designing applications from writing the specification document to deployment, while adopting an agile approach. With an academic background focused on information systems, my goal is to specialize in information system security or cybersecurity.

Experience

- Backend Developer

2023 - 2023

Chips Analytics Inc, New York

 - Developing applications based on microservice architecture using bus broker as a means of communication between services.
- Web Developer
